Teen Years

- Teen years are a time of tremendous change- physical & emotional
- Just like vision and hearing, teen emotional health plays an important role in academic & personal success
- Untreated emotional wellness concerns can cause many different problems in adolescents lives
- It is similar to an **annual physical**- you go whether you think something is wrong or not

According to the National Alliance of Mental Health, 1 in 5 children ages 13-18 have, or will have a serious mental health illness

Wellness Screen

- Voluntary, Confidential & **FREE**
- Must have **parent and student consent** to participate in the screening process
- 10 minute questionnaire on the computer followed with education on coping skills and resources
- Offer assistance in connecting to community and school resources, if needed

Screening identifies “**red flags.**” It does NOT diagnose or recommend any particular *type* of treatment

Case Management

- Parents are only contacted when a student's screen has concerns or risk factors
- Case Managers will then discuss the screening results with parents and help parents connect with community and school resources
- Our list of community resources has agreed to see wellness screen referrals within **7-14 days**
- Case Managers typically follow students through one to three appointments, up to 90 days, or until solid connection is secured
